

The Avanti family

From a high-end executive phone to a simple, cost-effective solution for your part-time workforce, whether VoIP or TDM is your technology of choice, Telrad Connegy has an Avanti phone extension to meet your every business need.

With an elegant and consistent design focusing on style and ease of use, Avanti is a complete family of devices that deliver advanced features and allow businesses to quickly and seamlessly realize the advanced capabilities and benefits of Telrad-Connegy's AdvancelP system.

All Avanti phones work with AdvancelP systems of any size, assuring your investment is protected as you grow. Moreover, as part of our Evergreen policy, the Avanti family was designed with backward compatibility so that our existing customers can easily upgrade their legacy system to work with Avanti phones.

TDM or IP?

When designing your telecommunication solution, you will no doubt take advantage of the power of a converged system, and decide on IP extensions for remote sites and TDM phones in your main customer service facility. But while these decisions affect the way the system is built, you do not want them to affect the user's experience.

At Telrad Connegy we realize that consistency in user interface and uniform availability of the advanced features built into the system are critical for the success of your business. This is why we have designed the entire Avanti family so that you do not need to trade features when switching technologies. An Avanti IP extension has all the features of its TDM counterpart and more. With two Ethernet ports (one for LAN and one for a PC connection), and a built-in Ethernet switch, it can be powered either over LAN or with a dedicated power supply. Once connected, the IP extension supports both DHCP and static IP addressing, and various standard vocoders, and it can be configured through a web browser.

But a typical user does not have to be aware of these advanced features. In fact, with all the care we've taken in order to create a uniform user experience whether on VoIP or TDM phones, you will probably have a hard time telling them apart.

The Avanti advantage

All Avanti models come with advanced capabilities such as a new message indicator, hot-key dialing, voicemail and ACD integration, soft keys and programmable keys, and an option for wall mounting and for connecting a headset. All Avanti phones can be extended to support more programmable keys by attaching a DSS module.

Avanti 3025

Featuring a large 128x240 graphic LCD with an adjustable angle, and with 29 programmable keys, 16 soft keys and an on-board "mouse", this is the perfect choice for executives or administrative staff making extensive use of advanced features and applications. The screen is large enough to display a list of voicemail messages or call history, and replace a computer screen in space-constrained environments.

Avanti 3015

A mid-range phone with a 2x20 character LCD screen, 19 programmable keys and three soft keys, this model is the workhorse of the Avanti family, and is our most popular model. It is available in both TDM and IP flavors, and either as full-duplex or half duplex.

Avanti 3000

The Avanti 3000 is the "bare bones" member of the family for cost-conscious applications. With no LCD screen and four programmable keys, it still provides the highest quality sound and can access the system's advanced features, such as hands-free answerback.

DSS add-on module

For users who just can't have enough programmable keys, the DSS module adds thirty more. It can be attached to the Avanti 3025 or 3015, and as many as four DSS modules can be added to the same phone.

Trunk add-on and SLT adapter

For users who need a dedicated external line (CO line) at their desktop, or wish to connect a modem or a fax, we offer adapters which connect to the Avanti 3025 or 3015 phones. The trunk add-on and SLT card are both single-line cards that fit into the base of the Avanti extensions.

In fact, with all the care we've taken in order to create a uniform user experience whether on VoIP or TDM phones, you will probably have a hard time telling them apart.
